

Ditap-V[®] Automation Pvt. Ltd.

Global Expertise in Turnkey process Automation, Instrumentation & Electrical Projects.

Process Automation Expertise

Rockwell Automation

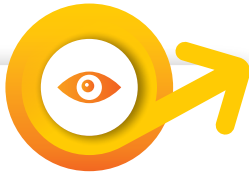

Honeywell

Certification :

ABOUT US

- **Ditap-V** offers a comprehensive range of Automation solutions across multiple industries, providing turnkey Process Automation solutions for process plants and utilities. With expertise in automation, instrumentation, and electrical projects from last 30+ years.
- The objective is to provide E&IC Solutions from concept to commissioning in process industry. Ditap-V is committed to delivering reliable & efficient Electrical & Automation solutions.
- The Company has executed more than @500 Turnkey Automation solution with complex requirements successfully in Thailand, Japan, Malaysia, Philippines, Shi-Lanka, Nigeria, Riyadh, Dubai, Switzerland, USA, Africa etc.

VISION

To be the most efficient and leading Engineering Company renowned for our working Methodologies, Technological and Human Resource Capabilities.

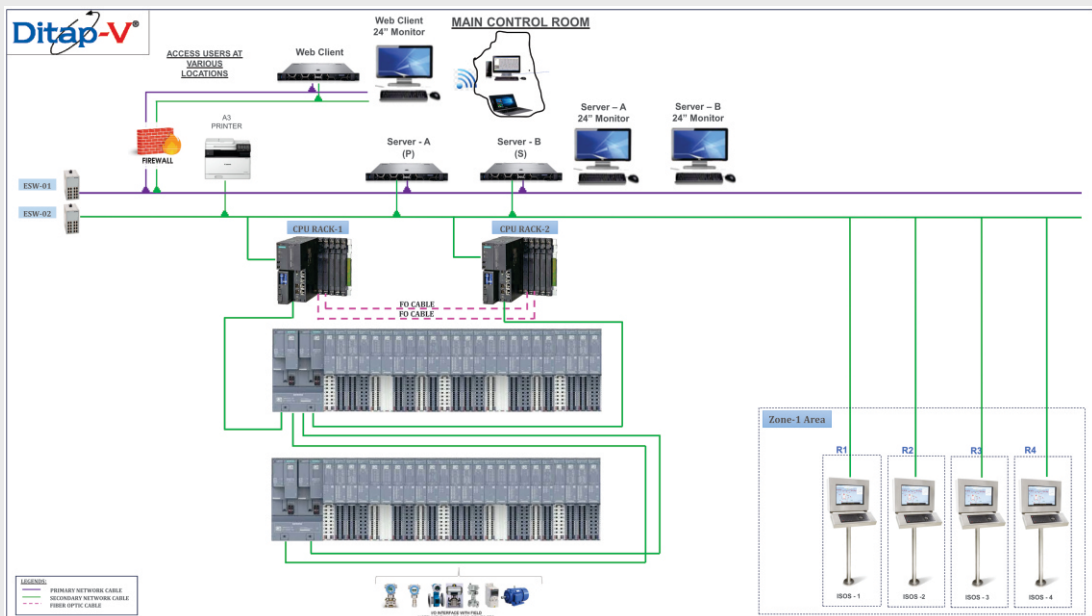

MISSION

Our Mission is to deliver value to our clients and stakeholders by providing complete turnkey Process Automation Solutions.

Areas of Expertise

- PLC/DCS/ Zone-1/ SIL 2/ SIL3 control System
- SCADA Systems
- Control System Validation
- BMS, HVAC, Fire detection system
- Electrical & Automation Systems with UL, CE, GOST certification
- Field Instrumentation
- IIoT solutions
- Annual Maintenance Contract For control System

SIEMENS

Rockwell Automation

Honeywell

ADVANTAGES OF AMC

- Spare parts management can help minimize downtime in emergency situations by ensuring the availability of critical spare parts for quick repairs or replacements, thus maintaining productivity and operational effectiveness.
- Efficient spare parts management can also improve service levels and customer satisfaction by enabling organizations to quickly address issues, ultimately reducing downtime and building customer loyalty.
- Additionally, by continuously monitoring and updating spare parts inventory, organizations can ensure that critical components are always in stock, further reducing downtime associated with waiting for replacements.
- Therefore, by having an efficient spare parts management system in place, organizations can effectively minimize downtime and maintain operational continuity, ultimately leading to increased productivity and profitability.
- The advantages of spare parts management for DCS and PLC in emergency situations include minimized downtime, improved service levels, preventive maintenance, and cost savings.
- Having critical spare parts readily available can help to minimize downtime and repairs can be made quickly, leading to increased system reliability and availability.
- Effective spare parts management allows for the implementation of preventive maintenance programs, ensuring that spare parts are available for scheduled maintenance, which can help prevent unexpected failures and improve system reliability.
- While not directly related to reliability, effective spare parts management can lead to cost savings, which can be reinvested in improving the reliability of the system through measures such as enhanced maintenance programs and the procurement of high-quality spare parts.
- Furthermore, their authorized channel partners are better equipped to provide warranty support, repair services, and spare parts. They have direct

access to the original parts and components, which can ensure that the system operates as intended and meets the necessary safety standards.

- In summary, DCS PLC AMC should be done by OEM or its authorized channel partners because they have the necessary knowledge, expertise, and access to resources to ensure that the system operates optimally and meets the necessary safety standards. By engaging with the OEM or their authorized channel partners, you can benefit from their support and maintenance services, which can help you maximize productivity, reduce downtime, and minimize maintenance costs.
- DCS (Distributed Control System) and PLC (Programmable Logic Controller) are critical components of industrial automation and control systems. Any failure or malfunction in these systems can have severe consequences, such as production downtime, safety hazards, and financial losses.
- To ensure the proper functioning and maintenance of DCS and PLC systems, it is essential to have expert knowledge and experience. This is where the authorized channel partners come in.
- The Authorized channel partners are responsible for designing, developing, and manufacturing the DCS and PLC systems. They have in-depth knowledge of the system's technical specifications, operational requirements, and maintenance procedures. They also have access to the latest updates, patches, and software upgrades.
- By engaging with the OEM or their authorized channel partners for DCS PLC AMC (Annual Maintenance Contract), you can benefit from their expertise and experience. They can provide you with timely support and maintenance services, including system updates, diagnostics, and troubleshooting. They can also ensure that the system is operating at optimal performance levels, which can help you maximize productivity, reduce downtime and minimize maintenance costs.

ADVANTAGES OF SPARE PARTS

01 Decreased Downtime

By having the necessary spare parts readily available.

02 Preventive Maintenance

Effective spare parts management allows for the implementation of preventive maintenance programs.

03 Increased Productivity

Reduce downtime and preventing disruptions in the production process.

04 Cost Savings

Proper spare parts management can lead to reduced inventory costs.

05 Improved Service Levels

Having critical spare parts readily available can improve service levels and customer satisfaction by enabling quick issue resolution and maintaining productivity.
